

$$\text{First}(E) = \{ (, id \}$$

$$\text{First}(T) = \{ (, id \}$$

$$\text{First}(F) = \{ (, id \}$$

$$\text{Follow}(E) = \{ +,), \$ \}$$

$$\text{Follow}(T) = \{ +,), \$, * \}$$

$$\text{Follow}(F) = \{ +,), \$, * \}$$

Follow is dependent on first.

• Production body to terminal terminal

E আনছে,

$$E \rightarrow E + T$$

$$F \rightarrow (E)$$

root node এর follow set বের করার

সময় by default \$ দিবে,

$$E \rightarrow E + T \mid T$$

$$T \rightarrow T * F \mid F$$

$$F \rightarrow id \mid (E)$$

Follow(E)

↳ E তক তক follow করছে,

E এর চিহ্ন আশাপাশি যে আছে

তবে E তক follow করছে,

↳ no সমস্যা with terminal.

followset এ কখনো ε থাকে না,

যখন তক follow করছে না তখন

rule এর production head এ

চেন যার then তার followset

T এ copy করবে

$$E \rightarrow E + T$$

$$E \rightarrow T$$

$$T \rightarrow T * F$$

$$T \rightarrow T * F$$

$$T \rightarrow F$$

যাচক বের করতে চাইলে তাকে
তক follow করছে না।

Test Cases,

$$A \rightarrow E B$$

$$C D B$$

$$C B D$$

$$C \rightarrow E +$$

$$D \rightarrow a$$

$$B \rightarrow id$$

$$A \rightarrow C B D$$

$$A \rightarrow C B a$$

$$A \rightarrow C B$$

$$C \rightarrow$$

$\text{First}(A) = \{id\}$

$\text{First}(B) = \{id\}$

$\text{First}(C) = \{+, \epsilon\}$

$\text{First}(D) = \{a\}$

$\text{Follow}(A) = \{\$, \}$

$\text{Follow}(B) = \{a, \$\}$

B has a 'follow' character.

non terminal follow character.

then D is first set of A's follow set a copy.

Then automation is made.

→ automation has parse table a shift, reduce, accept, error.

→ Reduce is not change (SLR is not)

LR(0) a non symbol a reduce is not, but is not reduce is not.

→ $F \rightarrow id;$ to reduce is not.

or rule reduce is not then head is follow set element is not. reduce is not.

LR(0) Parse Table

automation

Parse Table

Shift is not push

Reduce is not info then push

SLR(1) Parse Table

automation

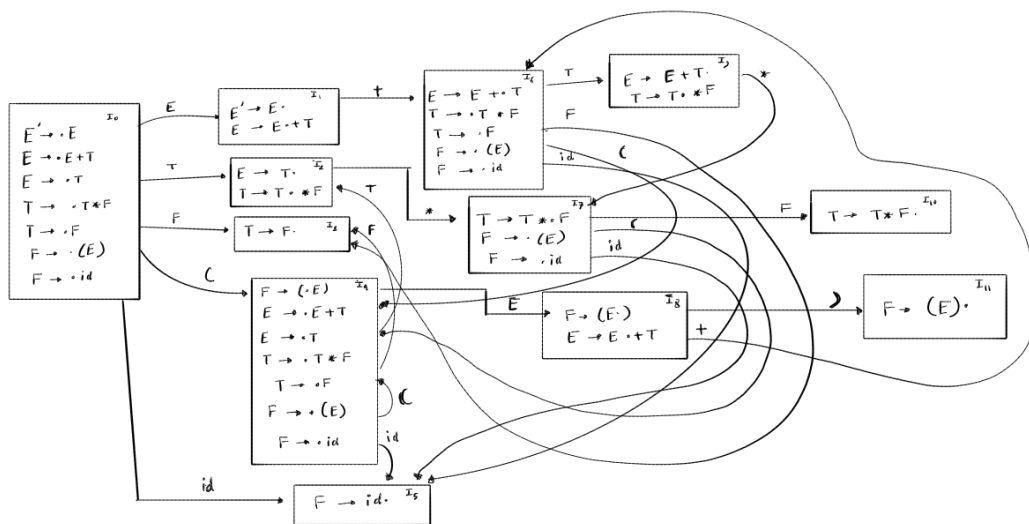

$\text{First}(), \text{Follow}()$

Parse Table

Parse $id * id$: using SLR(1) parser.

- $E \rightarrow E + T$ (i)
- $E \rightarrow T$ (ii)
- $T \rightarrow T * F$ (iii)
- $T \rightarrow F$ (iv)
- $F \rightarrow (E)$ (v)
- $F \rightarrow id$ (vi)

There will be two stacks :-
 - stacks
 - symbols

Stack	Symbol	Input	Action
0	\$	id * id\$	Shift to 5
0 5	\$ id	* id\$	Reduce by $F \rightarrow id$
0 3	\$ F	* id\$	Reduce by $T \rightarrow F$
0 2	\$ T	* id\$	Shift to 7
0 2 7	\$ T *	id\$	Shift to 5
0 2 7 5	\$ T * id	\$	Reduce by $F \rightarrow id$
0 2 7 10	\$ T * F	\$	Reduce by $T \rightarrow T * F$
0 2	\$ T	\$	Reduce by $E \rightarrow T$
0 1	\$ E	\$	Accept

Figure: Parsing using SLR(1) Parse Table.

State	Action						Go To		
	id	+	*	()	\$	E	T	F
0	S5			S4			1	2	3
1		S6				Accept			
2		R2	S7		R2	R2			
3		R4	R4		R4	R4			
4	S5			S4			8	2	3
5		R6	R6		R6	R6			
6	S5			S4				9	3
7	S5			S4					10
8		S6			S11				
9		R1	S7		R1	R1			
10		R3	R3		R3	R3			
11		R5	R5		R5	R5			

Figure: SLR(1) Parse Table.

Reduction \rightarrow go to state 212.

0 620 F 7000 decision for 0212 go to state

Gates question

Follow (A) contains set of all terminals present

Immediately in right of "A",

Rules:

1. Follow of start symbol is $\$$

2. $S \rightarrow A c D$

$c \rightarrow a b$

Follow (A) = First (c) = {a, b}

Follow (D) = Follow (S) = { $\$$ }

3. $S \rightarrow a S b S \mid \$ S a S \mid \epsilon$

Follow of S = {b, a, $\$$ }

Follow \rightarrow
production body
check

• A is right \rightarrow terminal
or direct \rightarrow first,
if variable \rightarrow
or first
first.

• D is not a first \rightarrow
or follow \rightarrow
production rule
 \rightarrow production head
or follow.

▣ $S \rightarrow A a A b \mid B b B a$

$A \rightarrow \epsilon$

$B \rightarrow \epsilon$

Follow (A) = {a, b}

Follow (B) = {b, a}

▣ $S' \rightarrow A B C$

$A \rightarrow D E F$

$B \rightarrow \epsilon$

$C \rightarrow \epsilon$

$D \rightarrow \epsilon$

$E \rightarrow \epsilon$

$F \rightarrow \epsilon$

$A \in \epsilon$ $A \in \epsilon$

Follow (A) = First (B)

First (C)

Follow (S) = { $\$$ }
